

Computer and Information Security

Curriculum

1. Digital Spying
2. Electronic Bugging
3. Security Systems
4. Biometric Security Devices
5. Digital Footprints
6. Identity Theft
7. Social Engineering
8. Computer Crime
9. Information Warfare
10. Computer Hacking
11. Technology Warfare
12. Cyber Terrorism
13. Transient Electro-Magnetic Devices (TEDS)

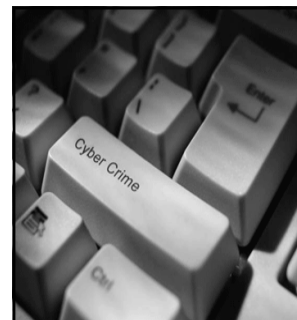

Program Objectives:

- ◆ Understand the increased importance of computer and information security.
- ◆ Understand the threat of cyber terrorism.
- ◆ Understand the critical components in computer security.
- ◆ Understand the state of computer security and the threat environment.

Program Overview

Computer and information security are areas of study that are rapidly growing in importance and visibility. With the increased ease with which an unscrupulous person can access the internet and commit eCrimes with and against computers, and with the increased emphasis on homeland defense in this country, there is a growing need for those in the security field to update their skills to minimize these threats. Spy-Ops' Computer & Information Security continuing education program will cover a wide variety of topics such as computer crime and digital spying. You will learn different aspects of computer crime and ways in which to uncover, protect and exploit digital evidence. You will also be exposed to different types of tools, both software and hardware, and be able to use them to perform rudimentary investigations.

The statistics tell the real story. The threat is real and it is growing on a daily basis.

FACT: In the past minute, over 6,500 computer attacks have been reported.

Cyber criminals, spies and even other governments are all involved in attacks against computers and the information infrastructure. Are you prepared to meet this challenge? Update your eCrime skills with our Computer Information and Security certificate program.

"I was basically clueless with regard to how significant the threats are to our information systems. Your course on computer crime opened my eyes. With this new information, we will be planning and implementing new programs that educate and protect the digital nervous system of our company."

*Mark Evenston
EVP of Technology*

Prepare yourself for the rapid advancement of your professional career by taking this program. It is designed for professionals who want to stay up-to-date on the latest in computer and information security. The program is delivered on CD or electronically, and includes thirteen modules that take approximately 26 hours to complete. Once you pass all thirteen exams, you will receive a Certificate in Computer Information and Security.

The world has become addicted to computers and information technology which has made it a prime target for attack.

Computer and Information Security

Quote

"The Spy-Ops Electronic Bugging course is quite informative. With technology advancing at the fast pace that it is, a course such as this would be very beneficial to any company or individual who may be a target of electronic espionage and would need to stay informed of security threats and solutions."
