

Cyber Warfare

Curriculum

1. Corporate Espionage
2. Digital Spying
3. Electronic Bugging
4. Intelligence Technology
5. Directed Energy Weapons
6. Digital Footprints
7. Scenario Based Intelligence Analysis
8. Social Engineering
9. Computer Crime
10. Information Warfare
11. Computer Hacking
12. UnRestricted Warfare
13. Critical Infrastructure Protection
14. Technology Warfare
15. Cyber Terrorism
16. Transient Electro-Magnetic Devices

Program Objectives:

- ◆ Understand the strategic nature of cyber warfare.
- ◆ Understand the threat of cyber terrorism and cyber warfare.
- ◆ Understand the current state of defensive cyber warfare capabilities.
- ◆ Understand the current state of cyber weapons.

Program Overview

Business, governments, industry and society have all become addicted to computers. With our heavy reliance on computer systems, they have become a primary military target as well as a prime target for terrorist attacks. The world realized in the late spring of 2007 that we had entered a new age of conflict when the country of Estonia experienced the first cyber war. The Estonia attack was unprecedented in size and scope and should alarm every nation around the world. Offensive cyber weapons have been developed by multiple countries that could create havoc and inflict significant damage to our information infrastructure.

Cyber arms have become easier to obtain, easier to use, and much more powerful. These weapons are a fraction of the cost of traditional weapons such as a tank or fighter jet. Therefore, state or group-sponsored attacks against information systems using computer viruses and other techniques should be considered an act of war. As such, governments must be proactive and establish parameters, definitions and regulations around cyber war. The Spy-Ops' Cyber Warfare Certificate Program provides you the fundamental knowledge you need in the age of cyber warfare.

Prepare yourself for the rapid advancement of your professional career by taking this program. It is designed for professionals who want to stay up-to-date on the latest in computer and information security.

"I saw a presentation with your materials in Toronto yesterday, and I wanted to tell you what a great product you have and how much I, as a professional, need the information you provided on cyber warfare."

*Terry K.
Information Security Consultant*

FACT: The first cyber war took place in April and May of 2007. Estonia was attacked disrupting government services as well as credit and debit card transactions. The attack lasted nearly 3 weeks.

The program is delivered on CD or electronically, and includes sixteen modules that take approximately 26 hours to complete. Once you pass all sixteen exams, you will receive a Certificate in Cyber Warfare.

The world has become addicted to computers and information technology which has made it a prime target for attacks.

Cyber Warfare

Quote

"Scenario-Based Intelligence Analysis (SBIA) is a force-multiplier, value-added intelligence concept that can yield returns for the decision maker. Not only can SBIA help reduce ambiguity that often plagues intelligence analysis, it also answers the "So What?" of information collected. In the analytical world, this is where the rubber meets the road."

*David Jimenez, Faculty
American Military University*
